

COS20007 - Object Oriented Programming

Student name: Nguyen Duc Manh
ID: 105547489

**2.1P - *In Person* Check-in 1 -
Checked-in tools and Prior
Experience Survey**

2.1P: In Person Check-in 1 – Answer Sheet

1. Briefly describe your prior experience with programming, e.g., industrial experience and which programming units/online courses you have studied.

I have finished a web development basic course in the past. Other than that I just looked up the information myself.

2. What do you think will be most challenging about object-oriented programming? In addition, what skills/goals do you expect to gained after studying this unit?

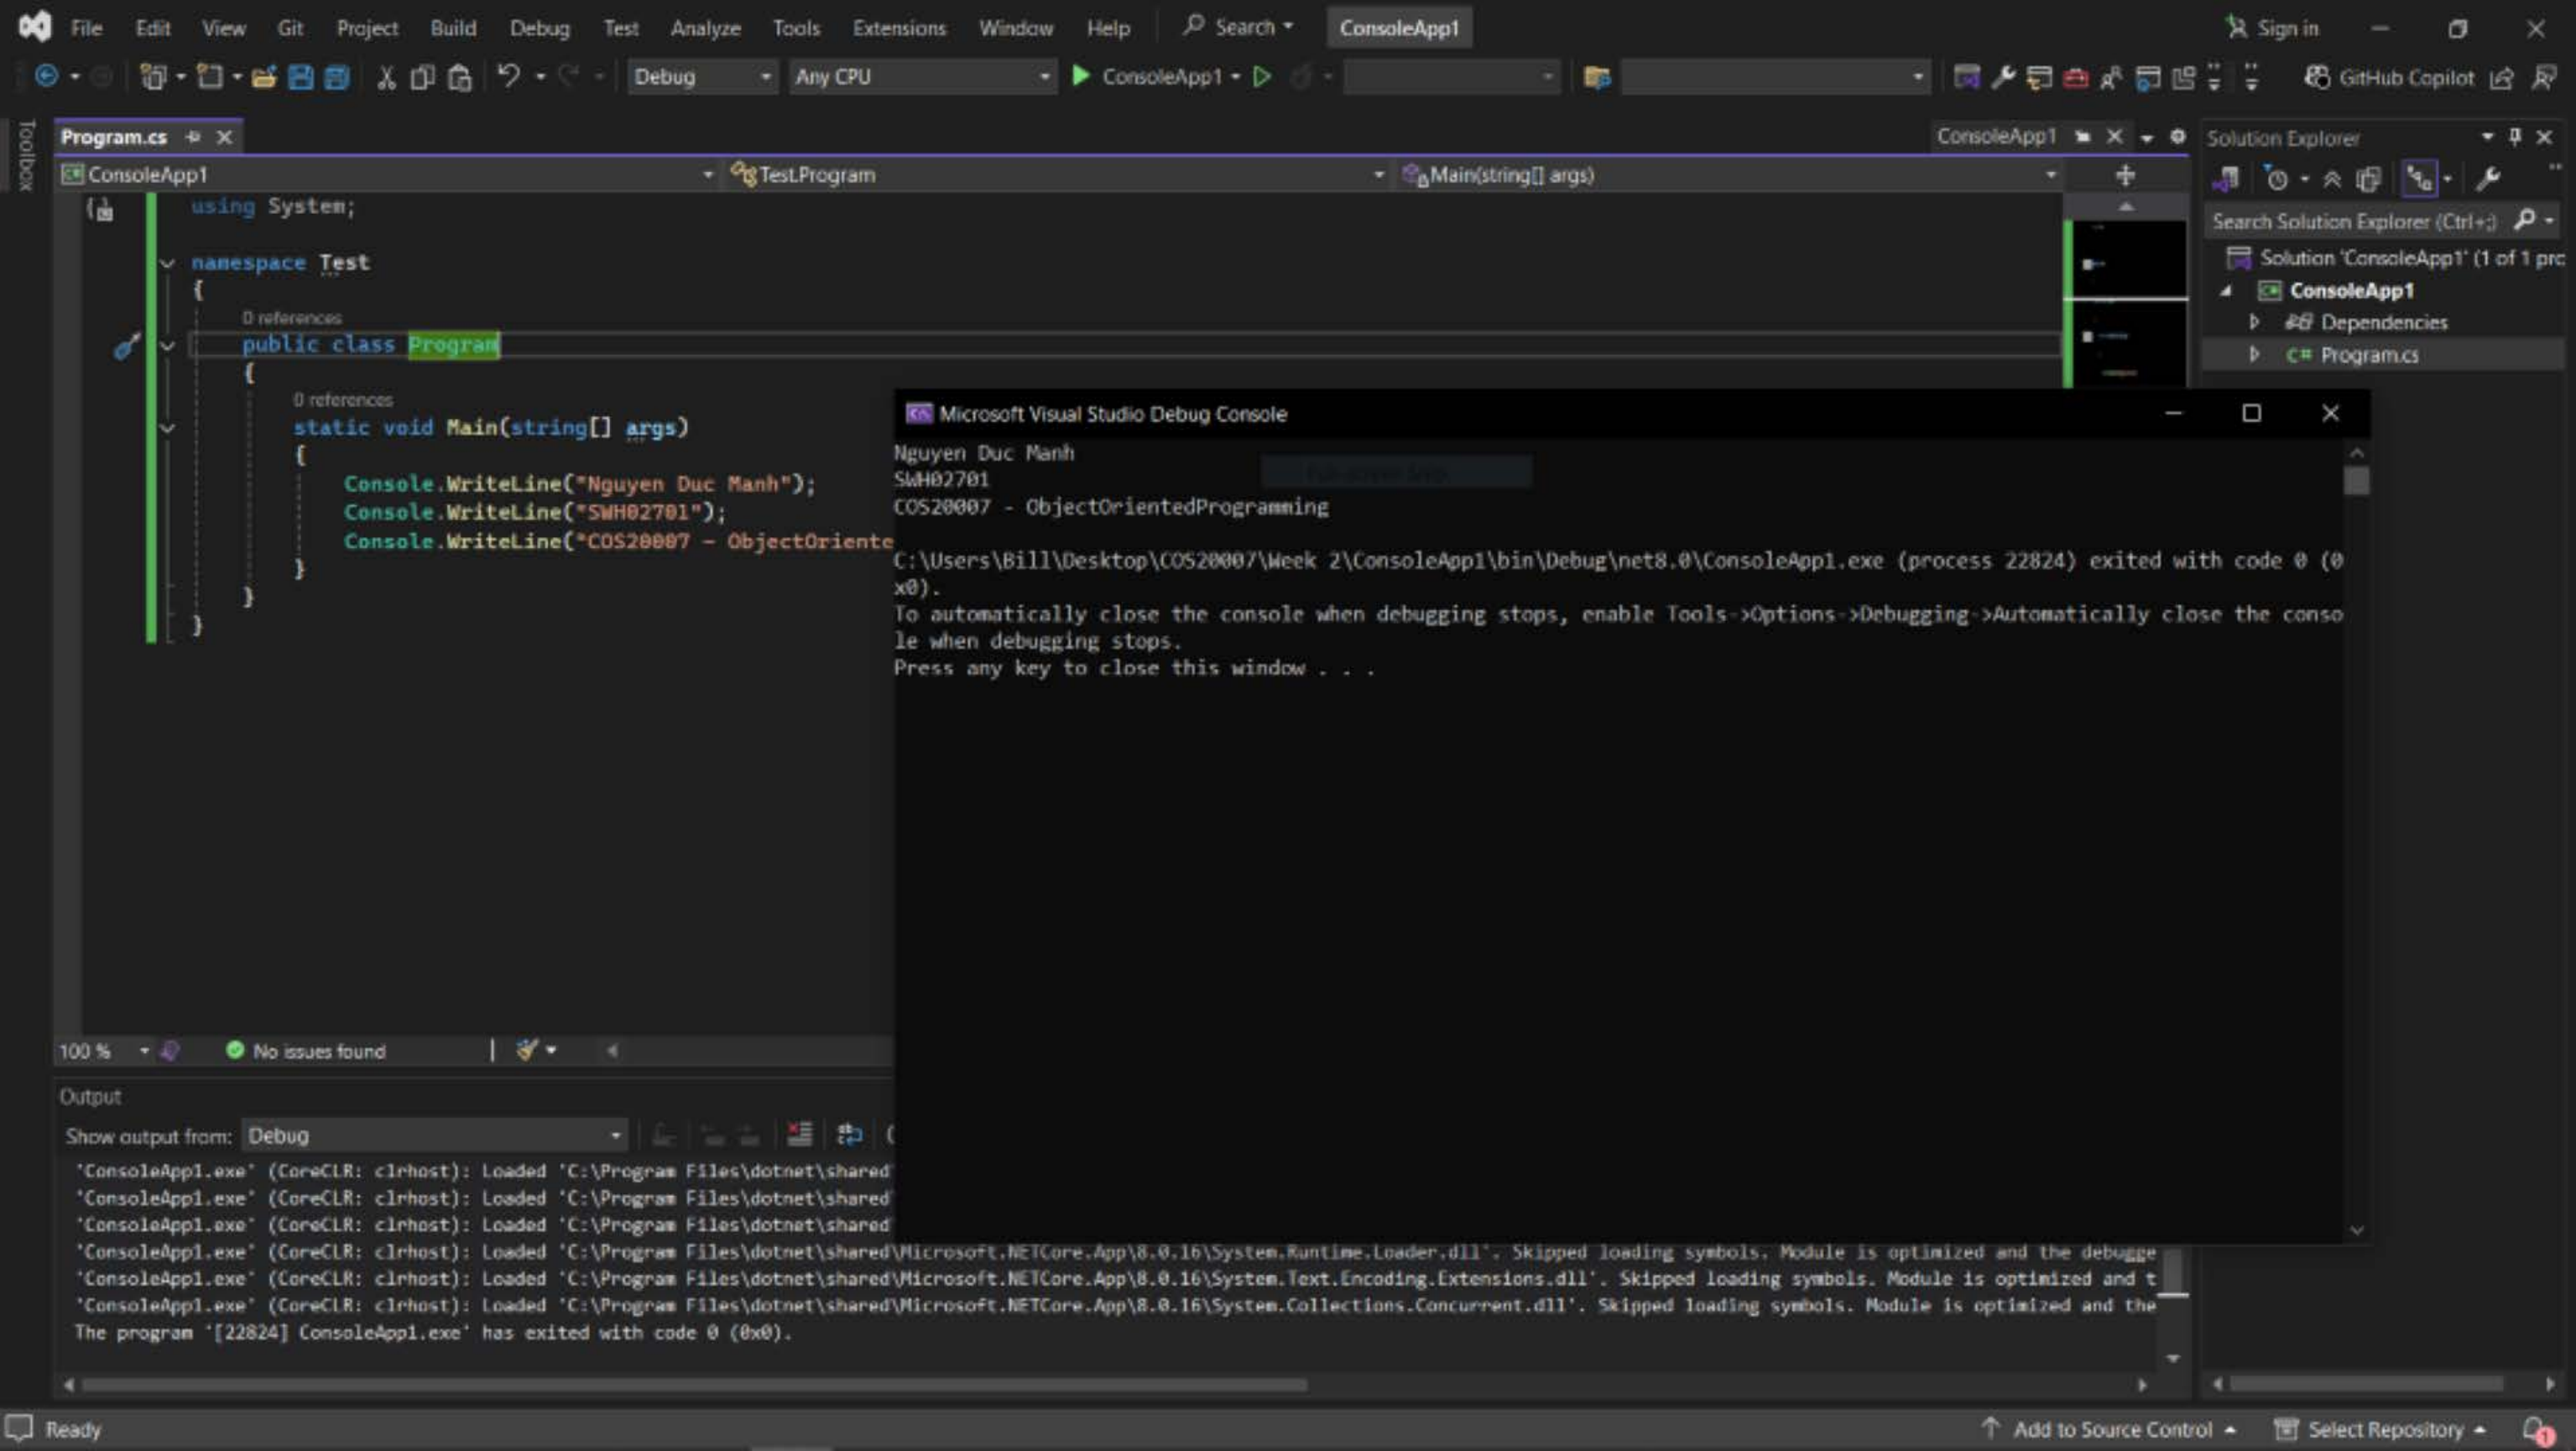

I think the most challenging part is that I haven't really get used to the C# language and also the concept of "Object-Oriented" is new to me.
I expect to understand the concept and can create some projects myself.

3. What can you do to prepare yourself for that challenge (resources you can use, approach to studying etc.)?

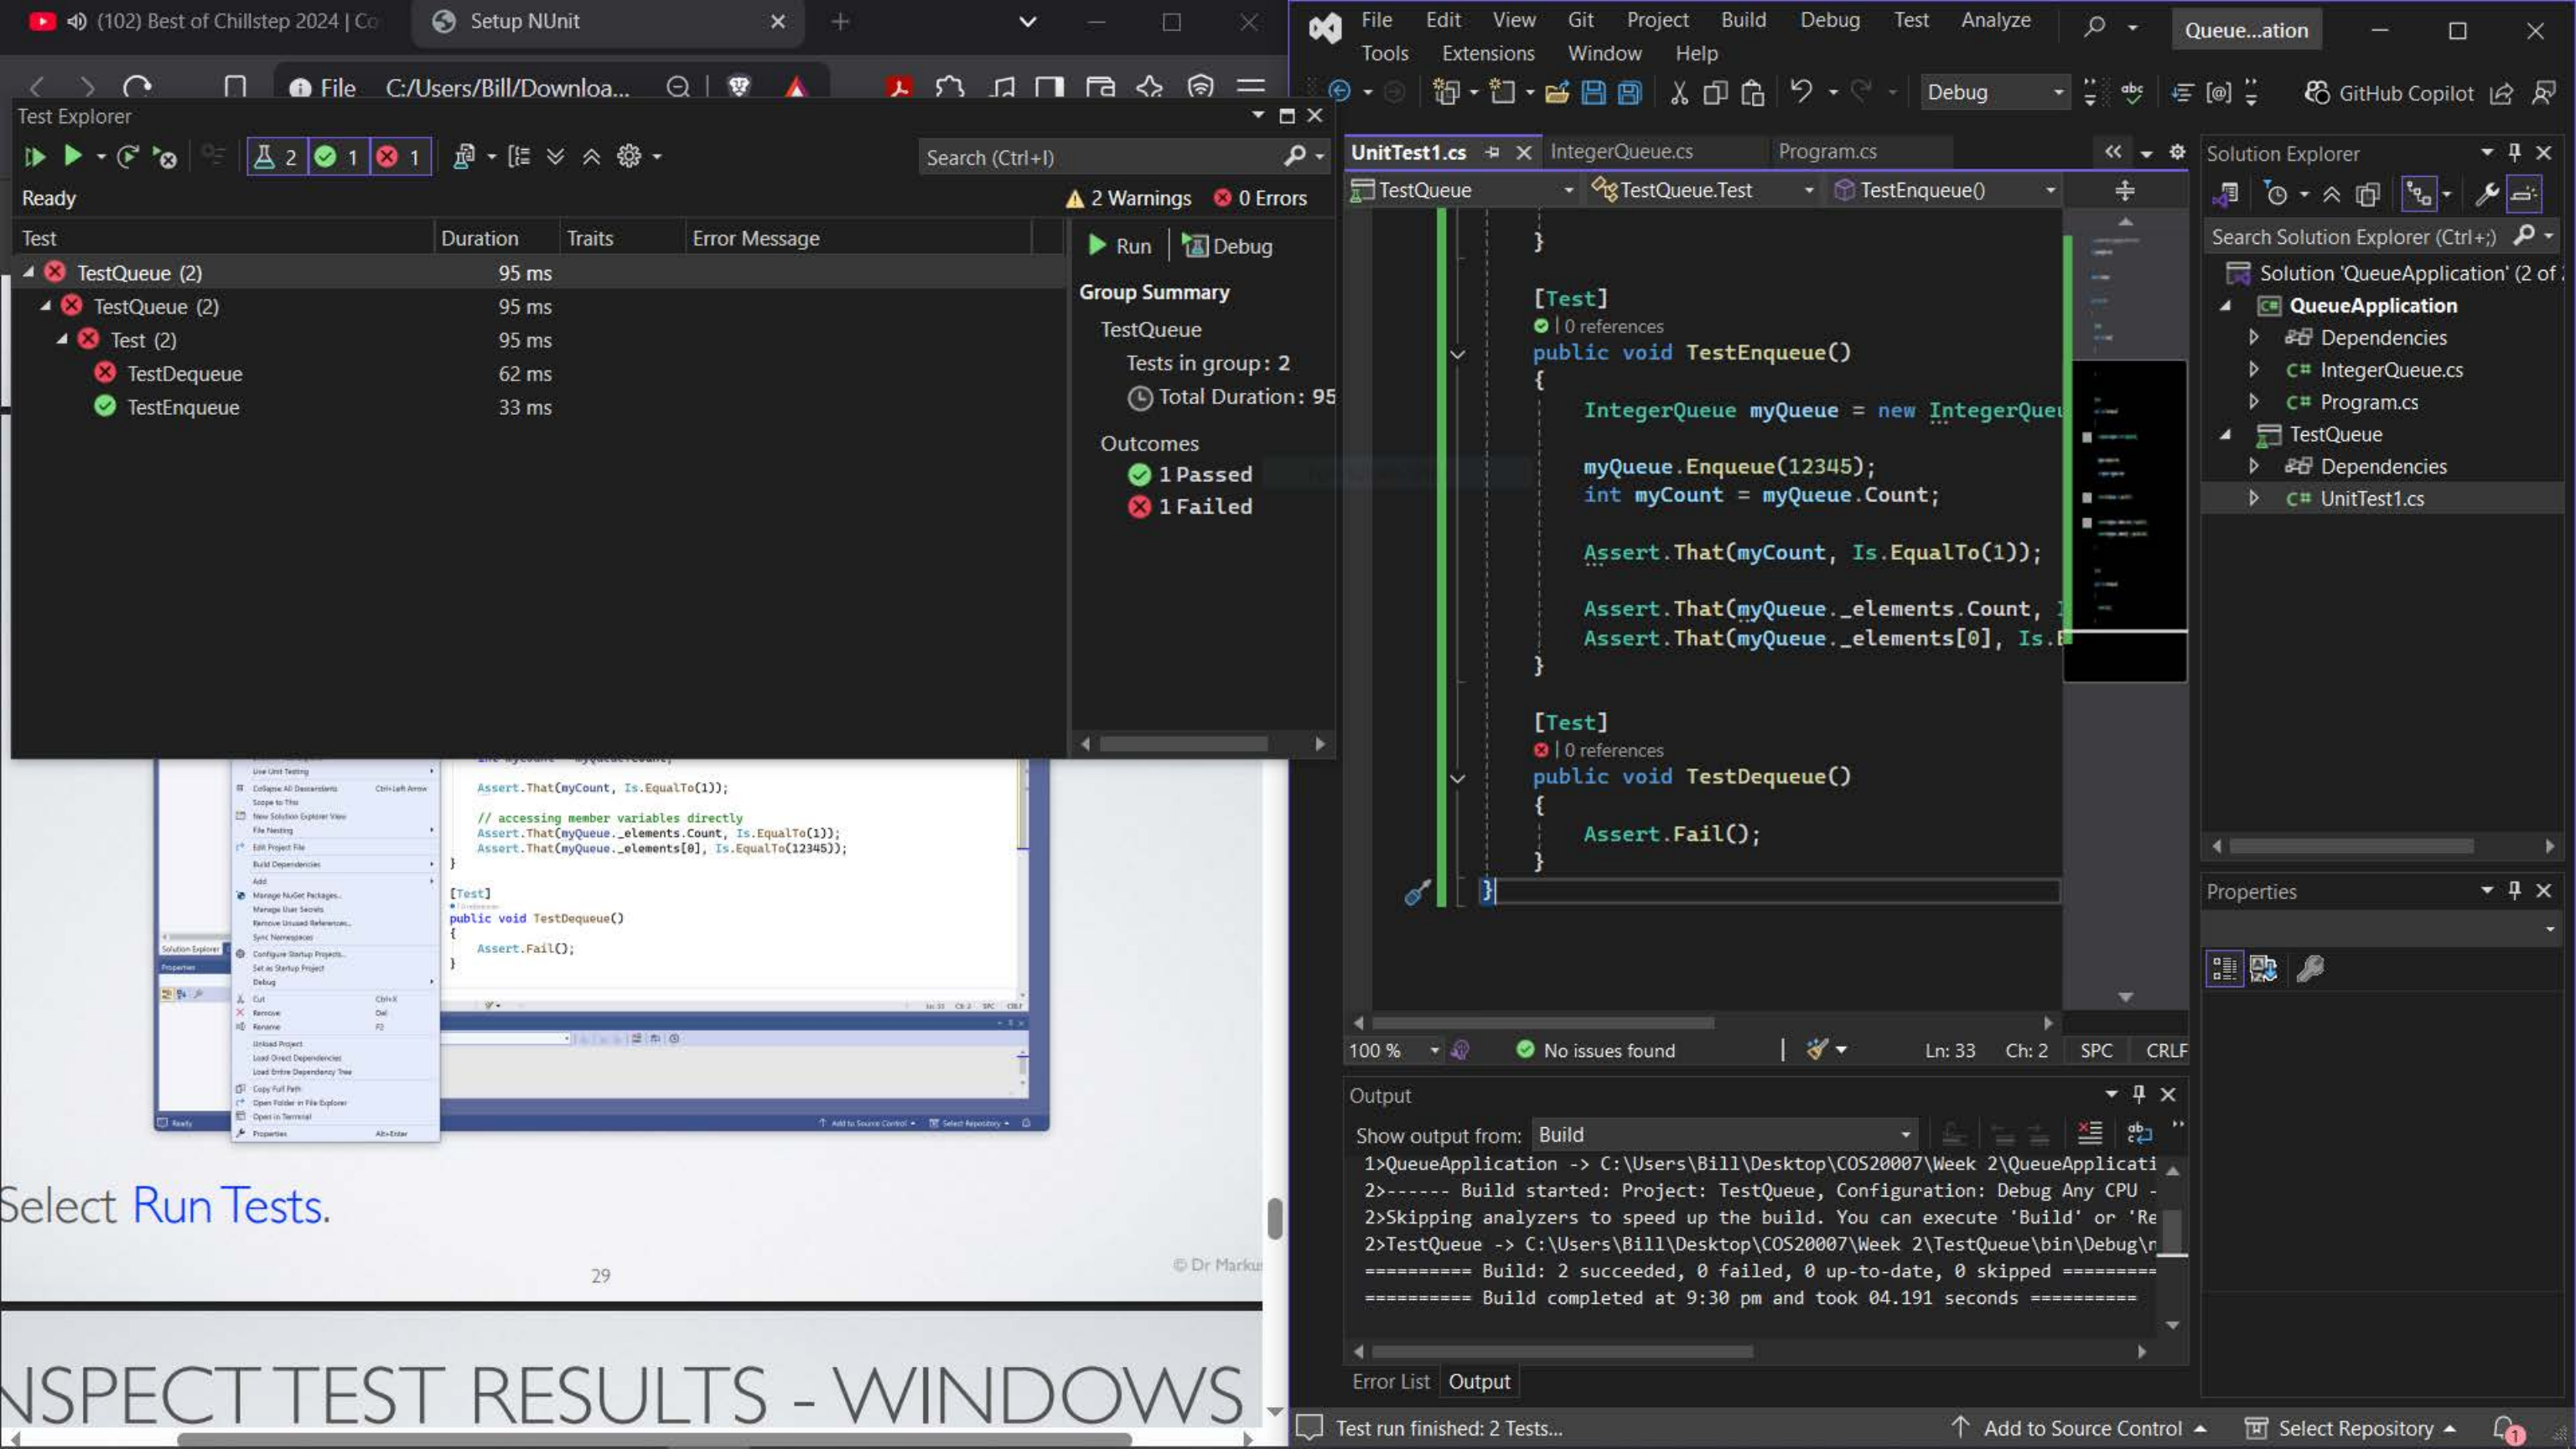

I think YouTube is a quite good resource for looking up information. Also I will read the book "C# in a nutshell" in the resource section of this course beside the guidance of the unit lecturer.

4. Is there anything you think the teaching staff should know to best help you this semester?

I think I may need more slow tutorials and records of the lectures so I can review again to fully understand everything.
